

THC Tincture_1

Sample ID: BIA241015S0009
Strain: 0

Matrix: Ingestible
Type: Tincture
Sample Size: 49.8 g
Lot#:

Produced:
Collected:
Received: 10/15/2024
Completed: 10/18/2024
Batch#:

Client
Craft Cannabis Co. Manufacturing
Lic. # MANU0064
290 Spring Hill Rd
Morristown, VT 05661

Summary

Test	Date Tested	Result
Sample		Complete
Cannabinoids	10/17/2024	Complete

Cannabinoids

Serving Size 1ml; Density - 0.956g/mL

Completed

15.24 mg/serving Total THC	ND Total CBD	16.25 mg/serving Total Cannabinoids
--------------------------------------	------------------------	-----------------------------------------------

Cannabinoids Methodology: High Performance Liquid Chromatography (HPLC) using PerkinElmer FLEXAR™ with Photo Diode Array Detector (PDA)

Total CBD and total THC are calculated values, to account for assumed decarboxylation from the acid form (THCA or CBDA) to the neutral form, causing weight loss of the acid group. These values are calculated as follows:

Total THC = (THCA x 0.877) + Δ9-THC

Total CBD = (CBDA x 0.877) + CBD Reagent

Blanks: < LOQs for all analytes

LOQ = The lowest quantity that this method can reliably detect. Any cannabinoid that was not detected is assumed to be less than the stated LOQ (<LOQ).

All results reflect dry weight of material, based on % moisture of the sample.

Measurement of Uncertainty (MU): the parameter, associated with the result of a measurement, that characterizes the dispersion of the values that could reasonably be attributed to the particular quantity subject to measurement. Δ9-THC MU = ±0.005% Total THC MU = ±0.007%

All other cannabinoid MU values are available upon request.

All moisture and water activity analysis is determined by dewpoint measurement using an AQUALAB water activity meter.
